H 1796 US

Claims

1. A coaxial plug connector comprising first and second receiving chambers which are surrounded by first and second metal sleeves, respectively, said first metal sleeve being made up of first and second half shells which are placed one on top of the other, and said second metal sleeve being inserted in said first half shell.
5
2. The coaxial plug connector according to Claim 1, wherein said first and second half shells are latched with each other.
3. The coaxial plug connector according to Claim 1, wherein one of said first and second half shells has a cut-out and the other of said half shells has a retaining lug engaging into said cut-out.
10
4. The coaxial plug connector according to Claim 2, wherein a crimping sleeve is attached to said first metal sleeve so as to be arranged at a distance from a latching point of said two half shells, said crimping sleeve securing said two half shells to each other.
15
5. The coaxial plug connector according to Claim 1, wherein said second metal sleeve is flanged in an interior of said first half shell.
6. The coaxial plug connector according to Claim 1, wherein arranged in an interior of said second metal sleeve is a first dielectric plastic body having a mount in which an inner conductor is arranged.
20
7. The coaxial plug connector according to Claim 6, wherein said second metal sleeve is provided with a plurality of small passage openings through which said first plastic body extends as far as to an outer side of said second metal sleeve.
8. The coaxial plug connector according to Claim 6, wherein said first plastic body extends as far as into said first half shell.
25

- 9 -

9. The coaxial plug connector according to Claim 6, wherein a second dielectric plastic body is provided so as to be arranged in said second half shell.

10. The coaxial plug connector according to Claim 9, wherein said second half shell is provided with a plurality of small passage openings through which said second plastic body extends as far as to an outer side of said second half shell.

11. The coaxial plug connector according to Claim 9, wherein said first and second plastic bodies are latched with each other,

12. The coaxial plug connector according to Claim 11, wherein one of said plastic bodies has a protrusion which engages into a recess in the other one of said plastic bodies.

13. The coaxial plug connector according to Claim 9, wherein said second plastic body rests at said inner conductor such that it is firmly held in said mount.

14. The coaxial plug connector according to Claim 9, wherein said first and second plastic bodies are provided with ribs which form a strain relief for a cable that can be crimped so as to be fixed in a crimping portion of said inner conductor.

15. The coaxial plug connector according to Claim 1, wherein said first and second half shells have longitudinal edges along which they overlap at least in part and wherein said second metal sleeve overlaps said first half shell.

16. The coaxial plug connector according to Claim 1, wherein said first and second metal sleeves are arranged at right angles to each other.
